MVP for Pier's Home Rehab Project

Server:

User can GET a list of tasks and their corresponding tools and materials to populate on page

User can POST selected tasks, tools and materials in corresponding boxes

(User can POST status updates and details under each task populated on page)

(User can PUT by marking task as not-started, in-progress, or completed)

5 Semantic tags:

1: button to ADD task to page

2: input form - add notes to task list + button

3: input form - add tools to tool list + button

4: input form - add materials to material list + button

5: header - title/subtitle

(6: footer - gallery)

Coding To-Do List:

Make the HTML file
Make the CSS styles

Make a server folder
    server.js

Make a public folder
    index.js

On the back-end in server.js create a arrays of tasks, one for drop-down menu and one with a task name, description, and the required tools and materials for each task to post to front-end boxes.
